Résumé de la présentation / Abstract

Based on the well known and accepted standard SPICE, the TestSPICE Modell reflecting the needs of stability and methodology to evolve the QA and testing is defined. Companies and experienced experts who are faced to typical situations with testing as an add on to development has derived this model to improve this for real life projects.

After an short introduction about structure and content of the modell, this workshop offers the opportunity to discuss how process implementation and integration supports are increased stability in testing.

The benefits will be discussed on the experience gathered with the model in the last year. In addition approaches and solutions relevant for the participants can be discussed.

All Participants will get an copy of the TestSPICE Model on a stick to use make use of it in the future.

---

Biographie / Biography

Detlef Vohwinkel is employed as manager process intelligence for the SQS Software Quality Systems AG. His responsibilities consist of the support of clients europe wide, in the process valuation and process improvement sectors, as well as being responsible for the organization of the SQS Services.
