

**Title**

## **Top 10 Quality tips to Agile**

---

**Speaker(s)**

Stevan Zivanovic, BJSS

---

**To whom is the presentation addressed?**

Anyone who is either in or looking to move to Agile.

---

**Keywords**

Quality, agile, process

---

**Abstract**

Testing for real in Agile development projects is now prevalent more than ever. However, due to the variety of Agile methodologies and the degree of customisation of the process by organisations, it is easy to miss the key activities that will assure the quality of the project.

This presentation will demonstrate how common problems can be prevented using ten practical, real life tips that the participants can take back to the work place and implement. In the course of the presentation, topics such as development testing, non-functional testing, environments, metrics and communication will be covered. Some of the activities proposed may also challenge pre-conceived ideas that participants may have about testing in an Agile environment and the presenter hopes to generate a healthy discussion at the end of the presentation.

---

**Biography**

Stevan has been actively involved in the Quality arena for over 18 years, where he has worked in a wide variety of businesses, from Safety Critical, to financial, to "Dot Coms". He has a pragmatic approach and has a proven track record of implementing realistic, workable, real world changes for large, multinational teams. Stevan has presented at EuroSTAR, BCS, UK Test Managers Forum and Agile Business Conference, where his presentations were well received. He enjoys speaking and training people to motivate them in testing and quality.
